Dear parents and students of Douglas School, As you know, our school was built over 150 years ago.

(A) We hope that you will understand how this brief inconvenience will encourage community-wide benefits for years to come. Sincerely, Vice Principal Kyla Andrews

(B) We hope this will help provide our students with the best education possible. I'm writing to inform you that the auditorium will be the first building closed for repairs. Students will not be able to use the auditorium for about one month while the repairs are taking place.

(C) While we are proud of our school's history, the facilities are not exactly what they should be for modern schooling. Thanks to a generous donation to the school foundation, we will be able to start renovating those parts of our campus that have become outdated.

Evan's eyes opened wide and his mouth made the shape of an O, which happened whenever something surprised him.

(A) Say goodbye to them?. Say goodbye to them?. He kept repeating himself, sounding more and more anxious with every repetition.

(B) You don't mean we're leaving Sydney?. he asked. His mother had just told him they were leaving Sydney for his father's work. But what about school?. said Evan, interrupting her, a thing he knew he was not supposed to do but which he felt he would be forgiven for on this occasion. And what about Carl and Daniel and Martin?.

(C) How will they know where I am when we want to do things together?. His mother told him that he would have to say goodbye to his friends for the time being but that she was sure Evan would see them again.

Without guidance from their teacher, students will not embark on a journey of personal development that recognizes the value of cooperation.

(A) However, we do need to teach them that there is more to life than winning and about the skills they need for successful cooperation. A group working together successfully requires individuals with a multitude of social skills, as well as a high level of interpersonal awareness. While some students inherently bring a natural understanding of these skills with them, they are always in the minority.

(B) Left to their own devices, they will instinctively become increasingly competitive with each other. They will compare scores, reports, and feedback within the classroom environment – just as they do in the sporting arena. We don't need to teach our students about winners and losers. The playground and the media do that for them.

(C) To bring cooperation between peers into your classroom, you need to teach these skills consciously and carefully, and nurture them continuously throughout the school years.

The creative team exhibits paradoxical characteristics.

(A) Thus, bringing together contradictory characteristics can accelerate the process of new ideas.

(B) But at the same time, the team needs fresh perspectives that are unencumbered by the prevailing wisdom or established ways of doing things. Often called a "beginner's mind," this is the newcomers' perspective : people who are curious, even playful, and willing to ask anything - no matter how naive the question may seem - because they don't know what they don't know.

(C) It shows tendencies of thought and action that we'd assume to be mutually exclusive or contradictory. For example, to do its best work, a team needs deep knowledge of subjects relevant to the problem it's trying to solve, and a mastery of the processes involved.

Too many officials in troubled cities wrongly imagine that they can lead their city back to its former glories with some massive construction project — a new stadium or light rail system, a convention center, or a housing project.

(A) With all that supply of structure and so little demand, it makes no sense to use public money to build more supply. The folly of building-centric urban renewal reminds us that cities aren't structures ; cities are people.

(B) Shiny new real estate may dress up a declining city, but it doesn't solve its underlying problems. The hallmark of declining cities is that they have too much housing and infrastructure relative to the strength of their economies.

(C) With very few exceptions, no public policy can slow the tidal forces of urban change. We mustn't ignore the needs of the poor people who live in the Rust Belt, but public policy should help poor people, not poor places.

6) 다음 문장 다음으로 이어질 알맞은 글의 순서는?

Many marine species including oysters, marsh grasses, and fish were deliberately introduced for food or for erosion control, with little knowledge of the impacts they could have.

(A) Atlantic salmon are reared in ocean net-pens in Washington State and British Columbia. Many escape each year, and they have been recovered in both saltwater and freshwater in Washington State, British Columbia, and Alaska. Recreational fishing can also spread invasive species. Bait worms from Maine are popular throughout the country. They are commonly packed in seaweed which contains many other organisms.

(B) Fish and shellfish have been intentionally introduced all over the world for aquaculture, providing food and jobs, but they can escape and become a threat to native species, ecosystem function, or livelihoods.

(C) If the seaweed is discarded, it or the organisms on it can colonize new areas. Fishing boats, recreational boats, and trailers can pick up organisms at one location and move them elsewhere.

Before the fancy high-rises, financial headquarters, tourist centers, and souvenir peddlers made their way to Battery Park City, the area behind the World Trade Center was a giant, gross landfill.

(A) In 1982, artist Agnes Denes decided to return that landfill back to its roots, although temporarily. Denes was commissioned by the Public Art Fund to create one of the most significant and fantastical pieces of public work Manhattan has ever seen.

(B) After months of farming and irrigation, the wheat field was thriving and ready. The artist and her volunteers harvested thousands of pounds of wheat to give to food banks in the city, nourishing both the minds and bodies of New Yorkers.

(C) Her concept was not a traditional sculpture, but a living installation that changed the way the public looked at art. In the name of art, Denes put a beautiful golden wheat field right in the shadow of the gleaming Twin Towers. For Wheatfield - A Confrontation, Denes and volunteers removed trash from four acres of land, then planted amber waves of grain atop the area.

Patricia Bath spent her life advocating for eye health.

(A) In the 1980s, Bath began researching the use of lasers in eye treatments. Her research led to her becoming the first African-American female doctor to receive a patent for a medical device.

(B) She decided to concentrate on ophthalmology, which is the branch of medicine that works with eye diseases and disorders. As her career progressed, Bath taught students in medical schools and trained other doctors. In 1976, she co-founded the American Institute for the Prevention of Blindness {AiPB} with the basic principle that "eyesight is a basic human right".

(C) Born in 1942, she was raised in the Harlem area of New York City. She graduated from Howard University's College of Medicine in 1968. It was during her time as a medical intern that she saw that many poor people and Black people were becoming blind because of the lack of eye care.

Organisms living in the deep sea have adapted to the high pressure by storing water in their bodies, some consisting almost entirely of water.

(A) Some predators hunting in the residual light zone of the ocean have excellent visual capabilities, while others are able to create their own light to attract prey or a mating partner.

(B) Most deep-sea organisms lack gas bladders. They are cold-blooded organisms that adjust their body temperature to their environment, allowing them to survive in the cold water while maintaining a low metabolism.

(C) Many species lower their metabolism so much that they are able to survive without food for long periods of time, as finding the sparse food that is available expends a lot of energy. Many predatory fish of the deep sea are equipped with enormous mouths and sharp teeth, enabling them to hold on to prey and overpower it.

10) 다음 문장 다음으로 이어질 알맞은 글의 순서는?

Human innovation in agriculture has unlocked modifications in apples, tulips, and potatoes that never would have been realized through a plant's natural reproductive cycles.

(A) Planting seeds of all kinds, even if they don't seem immediately useful or profitable, can ensure the longevity of those plants for generations to come. A balance must be struck between nature's capacity for wildness and humanity's desire for control.

(B) For example, a million people died over the course of three years during the Irish potato famine because the Irish relied primarily on potatoes and milk to create a nutritionally balanced meal. In order to continue its symbiotic relationship with cultivated plants, humanity must allow for biodiversity and recognize the potential drawbacks that monocultures of plants can introduce.

(C) This cultivation process has created some of the recognizable vegetables and fruits consumers look for in their grocery stores. However, relying on only a few varieties of cultivated crops can leave humankind vulnerable to starvation and agricultural loss if a harvest is destroyed.

11) 다음 문장 다음으로 이어질 알맞은 글의 순서는?

Relativity works as a general mechanism for the mind, in many ways and across many different areas of life.

(A) Say we have to choose between three burgers on a menu, at 8, 10, and 12 ounces. We are likely to pick the 10-ounce burger and be perfectly satisfied at the end of the meal.

(B) For example, Brian Wansink, author of *Mindless Eating*, showed that it can also affect our waistlines. We decide how much to eat not simply as a function of how much food we actually consume, but by a comparison to its alternatives.

(C) But if our options are instead 10, 12, and 14 ounces, we are likely again to choose the middle one, and again feel equally happy and satisfied with the 12-ounce burger at the end of the meal, even though we ate more, which we did not need in order to get our daily nourishment or in order to feel full.

12) 다음 문장 다음으로 이어질 알맞은 글의 순서는?

Philosophical activity is based on the recognition of ignorance.

(A) However, we know that awareness of what one does not know can be a good way to acquire knowledge. Knowledge and understanding are developed through thinking and talking. Putting things into words makes things clearer. Therefore, students must not be afraid of saying something wrong or talking without first being sure that they are right.

(B) The philosopher's thirst for knowledge is shown through attempts to find better answers to questions even if those answers are never found. At the same time, a philosopher also knows that being too sure can hinder the discovery of other and better possibilities. In a philosophical dialogue, the participants are aware that there are things they do not know or understand.

(C) The goal of the dialogue is to arrive at a conception that one did not know or understand beforehand. In traditional schools, where philosophy is not present, students often work with factual questions, they learn specific content listed in the curriculum, and they are not required to solve philosophical problems.

33

13) 다음 문장 다음으로 이어질 알맞은 글의 순서는?

The most powerful emotional experiences are those that bring joy, inspiration, and the kind of love that makes suffering bearable.

(A) Each time you experience true happiness, the stored emotions are activated as you are flooded with even deeper joy than you remembered. Your spiritual genes are, in a sense, your biological treasure map to joy.

(B) This is a simple example of how we can be flooded with happiness that becomes more intense as we contrast it with previous suffering. Experiences such as this go into the chemical archives of the limbic system.

(C) These emotional experiences are the result of choices and behaviors that result in our feeling happy. When we look at happiness through a spiritual filter, we realize that it does not mean the absence of pain or heartache. Sitting with a sick or injured child, every parent gets to know the profound joy that bubbles over when a son or daughter begins to heal.

34

14) 다음 문장 다음으로 이어질 알맞은 글의 순서는?

Deep-fried foods are tastier than bland foods, and children and adults develop a taste for such foods.

(A) We have food at every turn — lots of those fast-food places and grocery stores with carry-out food. But that ingrained "caveman mentality" says that we can't ever get too much to eat. So craving for "unhealthy" food may actually be our body's attempt to stay healthy.

(B) Fatty foods cause the brain to release oxytocin, a powerful hormone with a calming, antistress, and relaxing influence, said to be the opposite of adrenaline, into the blood stream ; hence the term "comfort foods". We may even be genetically programmed to eat too much.

(C) For thousands of years, food was very scarce. Food, along with salt, carbs, and fat, was hard to get, and the more you got, the better. All of these things are necessary nutrients in the human diet, and when their availability was limited, you could never get too much. People also had to hunt down animals or gather plants for their food, and that took a lot of calories. It's different these days.

Nurses hold a pivotal position in the mental health care structure and are placed at the centre of the communication network, partly because of their high degree of contact with patients, but also because they have well-developed relationships with other professionals.

(A) This is a highly sensitive and skilled task, requiring a high level of attention to alternative views and a high level of understanding of communication.

(B) This involves translating communication between groups into language that is acceptable and comprehensible to people who have different ways of understanding mental health problems.

(C) Because of this, nurses play a crucial role in interdisciplinary communication. They have a mediating role between the various groups of professionals and the patient and carer.

16) 다음 문장 다음으로 이어질 알맞은 글의 순서는?

When trying to sustain an independent ethos, cultures face a problem of critical mass.

(A) Distinct cultural groups of similar size do not, in the long run, persist in downtown Toronto, Canada, where they come in contact with many outside influences and pursue essentially Western paths for their lives.

(B) They manage this feat through a combination of trade, to support their way of life, and geographic isolation. The Inuit occupy remote territory, removed from major population centers of Canada. If cross-cultural contact were to become sufficiently close, the Inuit ethos would disappear.

(C) No single individual, acting on his or her own, can produce an ethos. Rather, an ethos results from the interdependent acts of many individuals. This cluster of produced meaning may require some degree of insulation from larger and wealthier outside forces. The Canadian Inuit maintain their own ethos, even though they number no more than twenty-four thousand.

17) 다음 문장 다음으로 이어질 알맞은 글의 순서는?

Heat is lost at the surface, so the more surface area you have relative to volume, the harder you must work to stay warm.

(A) The exception is humans. We pass 800 million heartbeats after twenty-five years, and just keep on going for another fifty years and 1,6 billion heartbeats or so.

(B) That means that little creatures have to produce heat more rapidly than large creatures. They must therefore lead completely different lifestyles. An elephant's heart

beats just thirty times a minute, a human's sixty, a cow's between fifty and eighty, but a mouse's beats six hundred times a minute - ten times a second. Every day, just to survive, the mouse must eat about 50 percent of its own body weight.

(C) We humans, by contrast, need to consume only about 2 percent of our body weight to supply our energy requirements. One area where animals are curiously uniform is with the number of heartbeats they have in a lifetime. Despite the vast differences in heart rates, nearly all mammals have about 800 million heartbeats in them if they live an average life.

18) 다음 문장 다음으로 이어질 알맞은 글의 순서는?

Interest in ideology in children's literature arises from a belief that children's literary texts are culturally formative, and of massive importance educationally, intellectually, and socially.

(A) Many so-called children's literary classics are televised, and the resultant new book editions strongly suggest that viewing can encourage subsequent reading. Similarly, some television series for children are published in book form.

(B) Perhaps more than any other texts, they reflect society as it wishes to be, as it wishes to be seen, and as it unconsciously reveals itself to be, at least to writers. Clearly, literature is not the only socialising agent in the life of children, even among the media.

(C) It is possible to argue, for example, that, today, the influence of books is vastly overshadowed by that of television. There is, however, a considerable degree of interaction between the two media.

19) 다음 문장 다음으로 이어질 알맞은 글의 순서는?

The United Nations asks that all companies remove their satellites from orbit within 25 years after the end of their mission.

(A) However, these methods are only useful for large satellites orbiting Earth. There isn't really a way for us to pick up smaller pieces of debris such as bits of paint and metal. We just have to wait for them to naturally re-enter Earth's atmosphere.

(B) Ways we could do this include using a harpoon to grab a satellite, catching it in a huge net, using magnets to grab it, or even firing lasers to heat up the satellite, increasing its atmospheric drag so that it falls out of orbit.

(C) This is tricky to enforce, though, because satellites can {and often do} fail. To tackle this problem, several companies around the world have come up with novel solutions. These include removing dead satellites from orbit and dragging them back into the atmosphere, where they will burn up.

(B) This positive boost in the participants' willingness to cooperate was induced regardless of whether they liked the music or not. When people are in a more positive state of mind, they tend to become more agreeable and creative, while those on the opposite spectrum tend to focus on their individual problems rather than giving attention to solving group problems.

(C) A study was conducted that explored what impact it has on employees. Results from the study indicate that participants who listen to rhythmic music were inclined to cooperate more irrespective of factors like age, gender, and academic background, compared to those who listened to less rhythmic music.

(A) Clearly, sending and receiving electronic messages in an environmentally conscious manner is by no means enough to stop climate change. But with a few careful, mindful changes, unnecessary CO2 emissions can easily be avoided.

(B) But how often do we consider the environmental impact of these virtual messages?. At first glance, digital messages appear to save resources. Unlike traditional letters, no paper or stamps are needed ; nothing has to be packaged or transported. Many of us tend to assume that using email requires little more than the electricity used to power our computers. It's easy to overlook the invisible energy usage involved in running the network – particularly when it comes to sending and storing data.

Music is used to mold customer experience and behavior.

(A) The rhythm of music has a strong pull on people's behavior. This is because when people listen to music with a steady pulse, they tend to match their actions to the beat. This translates to better teamwork when making decisions because everyone is following one tempo.

(C) Every single email in every single inbox in the world is stored on a server. The incredible quantity of data requires huge server farms — gigantic centres with millions of computers which store and transmit information. These servers consume massive amounts of energy, 24 hours a day, and require countless litres of water, or air conditioning systems, for cooling. The more messages we send, receive and store, the more servers are needed — which means more energy consumed, and more carbon emissions.

22) 다음 문장 다음으로 이어질 알맞은 글의 순서는?

There once lived a girl named Melanie.

(A) Unaware of time or the people around her, she was lost in her own little world of dancing. Just then, the ballet instructor entered the classroom and was surprised to see Melanie's incredible skill. What a performance!. the instructor said with a sparkle in her eyes. Melanie was embarrassed to see the instructor in front of her. Sorry, Ma'am!. she said. For what?. the instructor asked. You are a true ballerina!. The instructor invited Melanie to accompany her to a ballet training center, and Melanie has never stopped dancing since. Today, she is a world-renowned ballet dancer.

(B) She wanted to be a ballet dancer. One day, Melanie's mother saw her dancing with the flawless steps and enthusiasm of a ballerina. Isn't it strange?. Melanie is dancing so well without any formal training!. her mother said. I must get her professional lessons to help her polish her skill. The following day, Melanie accompanied her mother to a local dance institute. Upon meeting the dance teacher, Mr, Edler, her mother requested to admit Melanie to his institute. The teacher asked Melanie to audition. She was happy and showed him some of her favorite dance steps. However, he wasn't interested in her dance. He was busy with other tasks in the dance room. You can leave now!. The girls just average.

(C) Don't let her waste her time aspiring to be a dancer, he said. Melanie and her mother were shocked to hear this. Disappointed, they returned home, tears rolling down Melanie's cheeks. With her confidence and ego hurt, Melanie never danced again. She completed her studies and became a schoolteacher. One day, the ballet instructor at her school was running late, and Melanie was asked to keep an eye on the class so that they wouldn't roam around the school. Once inside the ballet room, she couldn't control herself. She taught the students some steps and kept on dancing for some time.
